3083 SWIVEL TOOL KIT (FOR 3/8 & 7/16 UNF THREADS)

When using the “O” Ring assembly tool, always grease the “O” rings lightly with the correct grease for required service, before assembly onto shaft.

When inserting shaft into block ensure that it goes into the side of block that has an edge chamfer or you may damage the “O” rings.

You must ensure that the circlip tool is screwed right up to the shaft ensuring there is no gap!

This is very important.

Put circlip onto tool then push down by hand 6mm before using the “Pusher tool”.

Check that the shaft rotates freely before use.
